Supharat Sukpong

EDUCATION

2022 - Present
Bangkok University
Bachelor of Engineering in
Artificial Intelligence Engineering
and Data Science
GPA : 3.92

2021 - 2022
GED & Gap Year

2019 - 2021
Benchamarachuthit Chanthaburi
School
MSEP : Mathematics, Science and
English Excellent Program

SKILLS

Programming

- Python
- SQL
- HTML & CSS

Tools

- Tableau
- Streamlit
- FastAPI
- Git
- Docker
- Google Cloud
- DBeaver
- Firebase
- SPSS

Technical Knowledge

- Computer Vision
- Machine Learning
- NLP
- Deep Learning
- Relational Databases
- Data Visualization
- Cybersecurity

Soft Skills

- Self-Motivation
- Creativity
- Adaptability
- Curiosity

EXPERIENCE

Jan 2026 – Present (Hybrid Academic/Work)
R&D Part-time (Business Development) | Mango
Consultant Co., Ltd.

- Managing a hybrid schedule (4 days/week) focusing on AI Development and Market Intelligence.
- Conducting Competitive Analysis to identify market trends and technical gaps, informing the strategic roadmap for next-gen ERP solutions.
- Prototyping and deploying AI-driven features to enhance business automation and user experience within the Mango ecosystem.

Jun 2025 – Nov 2025
R&D Intern AI in ERP (Cooperative Education) |
Mango Consultant Co., Ltd.

- Completed a 6-month intensive R&D internship focused on integrating Artificial Intelligence into ERP systems.
- Researched and developed Proof of Concepts (PoCs) for AI modules, specifically focusing on automation and predictive analytics to streamline enterprise workflows.

Speaker: Data Visualization and Data Analytics with
Tableau – BU Open House.

- Led a public workshop for prospective students and industry guests on transforming raw data into actionable insights.

Teaching Assistant: Data Visualization with Tableau.

- Guided students through complex data storytelling techniques and dashboard design best practices.

Technical Staff: AI Hackathon: Elephant Identification
2025.

- Provided technical support and infrastructure guidance for participants developing computer vision models for wildlife conservation.

ACTIVITIES

Activities & Competitions

- TESA Top Gun Rally 2024 & 2025 – National Embedded System Design Championship.
- TESA Top Gun Rally 2025
- PAN-SEA AI Developer Challenge 2025
- NSC 2025
- AI Thailand Benchmark 2025
- PSAT Health Hack 2024 & 2025 – Healthcare AI & Innovation Hackathon.
- Chaayo GCP (Google Cloud Platform) Season 4 & 5 – Cloud Skill Challenges and Infrastructure Implementation.

Projects

Viral Marketing Strategy Optimization
Analytic framework utilizing Unsupervised Learning to optimize viral reach.

- Developed a marketing optimization model based on the Six Degrees of Separation theory and the Similarity-Attraction Hypothesis.
- Applied Unsupervised Learning (Clustering) to identify high-potential "seed" nodes within social networks to maximize organic information cascades

KUKA "Guess Who" Interactive AI
Human-Robot Interaction (HRI) project for BU Open House.

- Engineered an interactive "Guess Who" game featuring a KUKA industrial robot arm integrated with Computer Vision.
- Implemented real-time AI classification to enable the robot to identify and interact with participants, enhancing public engagement through gamified robotics.

My Portfolio:

<https://monganio.github.io/my-portfolio/>

LearnRaiDee Chatbot

RAG-based Chatbot for Elective Course Recommendation

- Developed a Retrieval-Augmented Generation (RAG) chatbot to recommend major elective courses based on students' interests and preferences. Enabled personalized course suggestions using natural language inputs.

Multi-Agent System for ERP

Autonomous AI agents for enterprise resource planning.

- Designed a Multi-Agent System (MAS) architecture to automate internal ERP workflows and enhance decision-making.
- Built specialized agents for Intelligent Recommendations and process automation, reducing manual data entry and improving operational efficiency.

Intelligent Receipt OCR System

Automated data extraction for ERP and Analytics.

- Developed an OCR-based (Optical Character Recognition) pipeline to digitize data from diverse documents and receipts.
- Streamlined data ingestion for ERP systems by implementing automated validation and parsing of unstructured financial data.

Thai Gold Price Forecasting

Financial time-series analysis and predictive modeling.

- Developed a predictive model for the Thai gold market using Time Series Analysis (ARIMA/LSTM) and Machine Learning algorithms.
- Analyzed historical price data and market indicators to provide high-accuracy domestic price projections.
